(54) Title: AN INSTALLATION FOR TRANSMISSION OF ELECTRIC POWER

(57) Abstract: An installation for transmission of electric power via a high-voltage ac voltage line between two switchgear units, located at a large distance from each other, has an ac voltage line with at least one extruded cable (4', 4''), for the transmission of the electric power, with an inner electric conductor, an insulating layer of solid material surrounding said conductor, and an outer screen layer located at ground potential. In addition, the installation has one or more inductors (13), located along the extent of the cable between the switchgear units and integrated into the cable, said inductors being connected between the conductor of the cable and ground for reactive shunt compensation.
